

**Sickle Cell Disease
Public Health Strategic Planning Meeting
October 13, 2014**

Transition (Pediatric—Adult Care Management)

{Identify up to 3 priority goals and strategies to address this issue}

1. Define the problem.
2. Identify barriers and solutions to addressing the problem.
3. Identify best practices or existing models. If a model or best practice doesn't exist for sickle cell disease, does it exist for another disease? Describe.
4. Prioritize the issues you identified in order of importance and feasibility. How could the health department implement your strategy and who would do it?
5. How can MDCH and the State of Michigan aid in transitioning SCD care?
6. What should patient transition entail?
7. At what point do you think physicians should start discussing care transition with their patients?
8. How do you think we can better educate patients on the importance of transitioning care?
9. Should the State of Michigan and MDCH work to increase the number of hematology and primary care providers willing to manage patients with SCD? Why or why not? If so, what are some ways we could do this?
